### Livermore Falls Public Works Goes Trenchless

Public works Foreman Bill Nichols was faced with a tough situation in August of 2008 when a old granite culvert began to fail causing a sinkhole and making the Haines Corner Rd impassable to emergency responders, school buses, and residents. Bill contacted the Ted Berry Company Trenchless Team who devised a plan to install a new HDPE 36" liner system. Along with the help of local excavator Don Mercier the new storm drain line was installed in one day without excavating the entire 20' depth across the road which was 80' wide. The plan was first reviewed with ME DEP and the IF&W departments who both approved of the plan which would minimize disruption to the streambed.
