Celebrating our 35th anniversary in 2007

Has your newly installed PVC sewer main failed a deflection or mandrel test?

The Ted Berry Company
Trenchless Technologies Team
now offers Vibratory
Rerounding for PVC pipe.

- Restores deflected sewer pipes back to within tolerances without costly digging.
- A powerful high frequency vibration consolidates and stabilizes material around the pipe to keep deflections from returning.
- Only smooth contoured surfaces come in contact with the pipe.
- Vibration is transmitted radially. There is no impact force driving the rerounder forward.
- With vibration doing most of the work, 300 lb. to 2000 lb. of pulling force is usually adequate. In most cases 500 lb. is enough.
- Our team will provide a final CCTV inspection and deflection test at completion of work.

Municipal Services/Video Pipeline Inspections/Trenchless Technologies

- CCTV Inspection (PACP Certified)
- Sewer and Storm Drain Cleaning
- Remote Access Pipe Cleaning
- Municipal and Industrial Vacuum Services
- 15,000 PSI hydroblasting and surface preparation
- High Volume/Sludge pumping
- Hydro-Excavation
- Pipebursting – Static and Pneumatic
- Sliplining
- CIPP – Sectional Point Repairs 4"-24"
- Outfall cleaning
- Root Intrusion Solutions
- Wastewater Collection System O&M
- Trained Confined Space Entry team
